Designers / Developers	Bhumi Pundhir & Jaislin Kotwani
Project	Hackathon project: website built for demonstration purposes
Permission	Written permission letter received from the owner to use the business name, product images, logo and related information

2. Client Interview: 5 Questions and Answers

Q1. What products does your business offer?

We make flower bouquets and chocolate bouquets, along with cakes, cupcakes, cookies, donuts, waffles and chocolates. We also make handmade gifts and gift hampers, which can be personalised for the occasion.

Q2. Who are your target customers?

Mostly people in Ajmer and nearby areas who want a thoughtful gift or dessert for birthdays, anniversaries, festivals and surprises. Our customers are young adults, families and friends who prefer something personal and handmade over a mass-produced product.

Q3. What is the main purpose of having a website for your business?

To showcase our products in one place, build a stronger online presence beyond social media, and tell the story of the brand. We also want customers to be able to reach us easily with an enquiry, since most orders are customised and confirmed over WhatsApp.

Q4. What features would you like to see on your business website?

A clear product gallery split into bouquets, desserts and gifts; an Enquiry button on every product; a contact page that opens WhatsApp; a customer reviews page; an Our Story section with FAQs (shipping, returns, products); links to Instagram, WhatsApp and Google Maps; and, if possible, a Hindi / English toggle and a light / dark mode.

Q5. What kind of design would you prefer for your website?

Clean, simple and elegant, with a warm and personal feel. Not too crowded, with large photos, easy navigation and short, friendly taglines. It should look good on a phone, as most of our customers will open it from Instagram or WhatsApp.

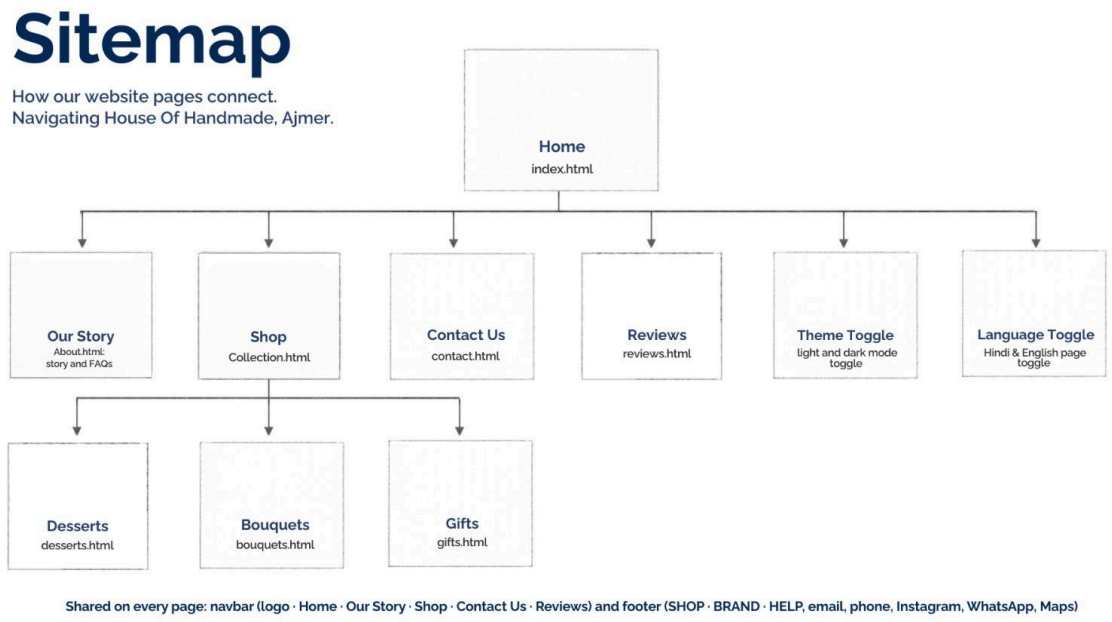

3. Design Decisions from the Interview

- **Enquiry-based, not a checkout:** because orders are customised, every product has an "Enquiry" button and the contact form sends the message through WhatsApp.
- **Products grouped by type:** Desserts, Bouquets and Gifts each get their own page so customers find things quickly.
- **Trust and story:** an Our Story page with FAQs and a Reviews page build confidence for first-time buyers.
- **Reach:** Hindi / English toggle and a mobile-friendly layout suit local customers.

4. Sitemap

The sitemap shows how the pages connect. Home (index.html) links to Our Story, Shop, Contact Us and Reviews, and also holds the theme and language toggles. Shop branches into Desserts, Bouquets and Gifts. The navbar and footer are shared on every page, so visitors can always move around easily.

5. Hand-drawn Wireframes

Our hand-drawn wireframes were planned page by page before coding, covering layout, navigation and where each image, heading and button sits. Each page shares the same navbar and footer (Shop, Brand, Help, email, phone and social links).

6. Colour Choices and Reasons

We chose a restrained palette so the brand feels calm and premium, and so the colourful cakes, flowers and gifts are the stars of every page.

Colour	Hex	Where used	Why we chose it
Deep Navy	#1F2F5C	Headings, logo text, nav links, buttons, borders	Calm and trustworthy; strong contrast on white for easy reading.
White	#FFFFFF	Page background, cards	Keeps the layout clean so product photos stand out.
Soft Grey	#F3F3F3	Hero strips, footer, section bands	Separates sections gently without adding visual noise.
Mid Grey	#D9D9D9	Dividers, input borders, placeholders	Neutral support tone; never competes with the navy.
Dark-mode Night	#121826	Background when theme toggle is on	A navy-tinted dark keeps the brand feel in dark mode.

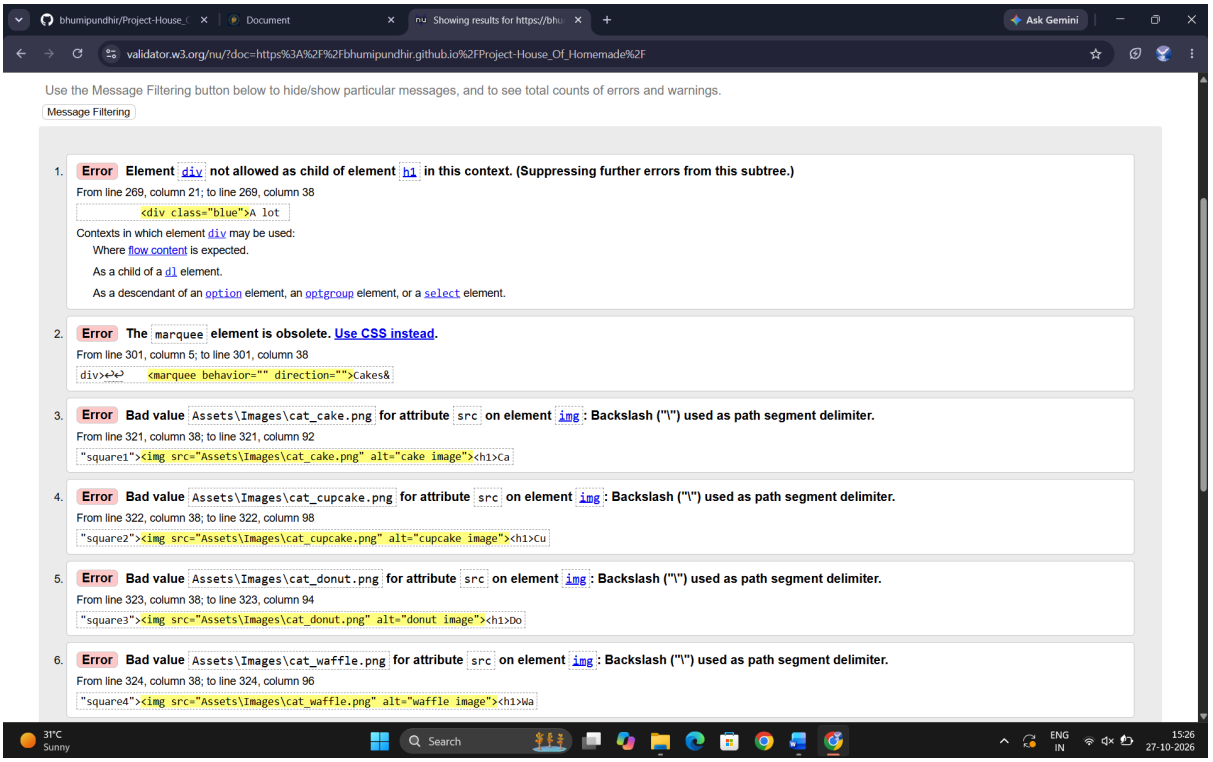

Why navy and neutrals? Dessert and gift brands often use pinks and pastels, which can look crowded next to colourful products. Navy on white feels clean, modern and trustworthy, and it keeps text readable on small phone screens. The same navy carries through the logo text, headings and buttons for a consistent identity.

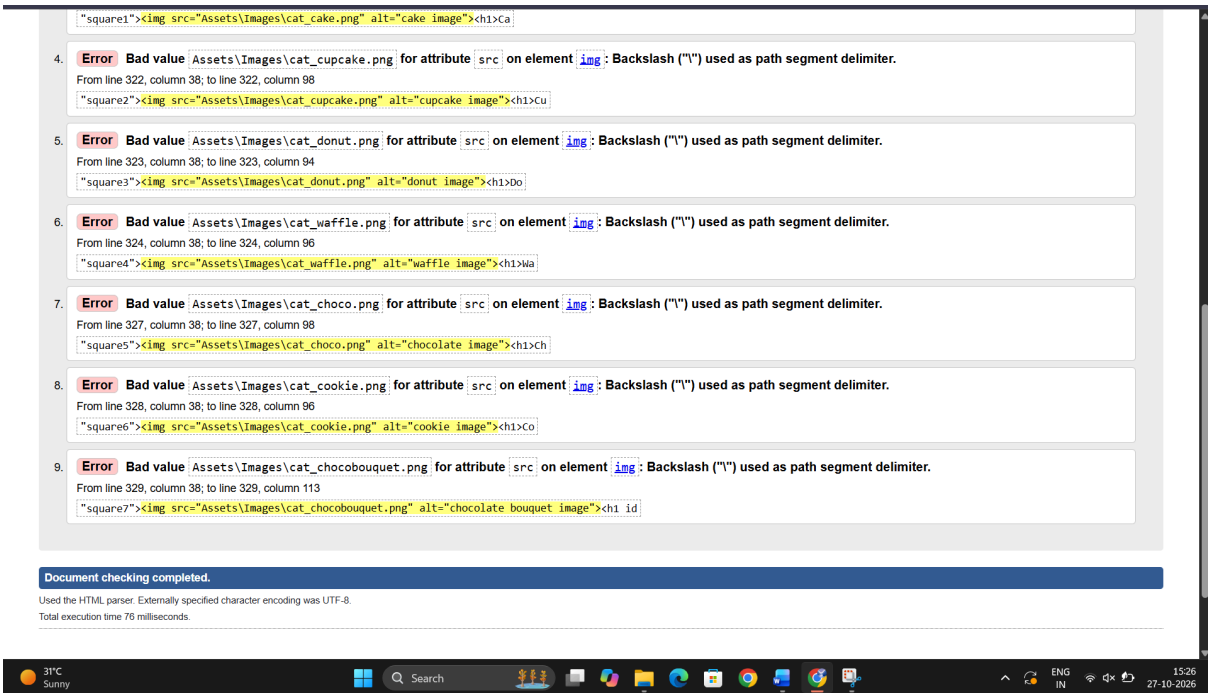

7. Font Choices and Reasons

Typeface	Raleway (sans-serif), with Arial / sans-serif as a fallback
Headings	Raleway Bold in navy, large and friendly, for taglines such as "A little box. A lot of meaning."
Body and navigation	Raleway Regular / Medium, in dark grey or navy, for product details, FAQs and footer text
Why this font	Its rounded, geometric shapes feel warm and modern rather than formal, matching a handmade brand. It stays clear at small sizes, and the large weight difference between bold and regular makes a simple hierarchy without needing extra fonts.
Why one font family	Using a single family keeps the site tidy, loads faster and looks consistent on every page.
